An Appreciation

We want to extend our sincere thanks to our thousands of customers all over the United States, Canada and to those in the far corners of the world, for a very successful season just passed. We trust you have derived as much pleasure from the bulbs as we have in supplying you. We have many things to offer again this year and will appreciate your continued patronage.

We regret, however, that we had to disappoint some 3500 customers at the end of the season. A disastrous fire that started about 9 p. m. Sunday night, April 20th, completely destroyed our entire shipping room and facilities, one new truck, all the bulb stock on the first floor, 85% of our bulblet stock and a large percentage of our planting stock for the season of '52. All bulb stock not burned or dry cooked was drenched with water or black as coal with smoke, making it necessary to discontinue all shipping.

With what we were able to salvage, plus some stock purchased and the very generous gifts of other growers belonging to the Commercial Gladiolus Growers Organization, from coast to coast, and other friends, we were able to plant almost our usual acreage. I want to say that all this generous help is greatly appreciated and many thanks to every one of these fine people. As this catalog goes to press we are rebuilt waiting for the painter and will be appreciative of your orders as usual.

The GRAND CHAMP

THE MOST POPULAR COLLECTION WE OFFERED FOR 1952

Again in 1952, 97 Gladiolus shows were held in the U. S. and Canada. These shows are getting larger each year and it is safe to say that 300,000 spikes were shown, probably divided up into 2500 varieties, drawing an estimated 150,000 people. There is an opportunity for everyone to enter his best spikes in any show he or she can get to. If you are just a beginner, enter in the novice class, if you grow 10,000 bulbs or more, there is a class for you.

A Grand Champion is picked from every show. It is the best spike in the show and it is surprising how few varieties win this top honor. In 1951 (the show reports are not in for 1952 at this writing) only 6 varieties won 2 or more grand champions. Below we list the 6 varieties plus 9 others and you too can win grand champions.

Note: Fork in a good application of compost into your best garden soil or use one bale of peat moss to a 10x20 ft. plot. Plant these champion bulbs 8 inches below the surface **but only cover 4 inches deep to start with, and fill in later.** Another good method is to dig a trench one foot deep, spread an inch layer of well rotted manure, cover with 3 inches of soil and plant bulbs on this. Apply one inch of water weekly if no rain or otherwise keep plenty damp. Light applications of a good commercial fertilizer such as 5-10-10 twice during the growing season is beneficial. Mulch with 2 inches sawdust, chopped hay, straw, or lawn clippings when plants are 18 inches high. Stake each plant to make sure it stays straight, spray or dust once a week. Cut at the right time and head for the nearest show. Try and convince yourself. See other directions page 40.

CATALOGS

We want everyone interested in any way to have one of our catalogs. However, please remember catalogs such as we put out cost real money. If you do not order in two years we take for granted you are no longer interested and your name is taken from our files. Our catalogs cost about 25c each and with the thousands we send out it runs into a large sum. If you have not ordered recently, some word in the way of a post card will be greatly appreciated. Please print name and address when writing us.

QUESTIONS WE ARE OFTEN ASKED

Why do my bulbs all go back to that small yellow (or pink or orange)? Your bulbs do **not** change or revert back at all, even though people have asked this question hundreds of times. If you would keep your varieties separate you will find this is true, but you will find that some are very prolific, while others are weak and have no resistance to disease, virus, etc. The prolific variety propagates exceptionally fast, probably from the bulbs splitting up as well as from bulblets. As a result, in two or three years' time, you will increase the percentage of this variety many, many times. Again, the bulbs of this variety will no doubt keep well. No, I have never seen one change in our long experience in growing hundreds of acres.

New Introductions

WELCOMED BY GLAD CONNOISSEURS

**SUNNY CHIP (Schafer-'53) 80 days-421
(Orange Gold x Picardy)**

I have seen this variety as a seedling for the past two years at many of the Empire State Shows. For some reason or other, I have learned not to become too enthused over every seedling that comes into the limelight, but this variety fills a need both to us and the color class. First, I believe there are very few varieties in the orange class that will successfully compete with **SUNNY CHIP**, on the show table. Second, we need a good orange as a commercial variety.

The rugged green foliage, plant and bulb carry all the good characteristics of the Orange Gold parent while it has that extra stretch and number of buds submitted by Picardy. It makes 17 to 18 buds, 6 open, and 7 showing color, on a 26-inch flower head, which has an informal placement. It has a nicely ruffled and waved orange-apricot floret with a small vermilion feather on the lower petal that tends to put life into the flower. Shape of the floret is triangular and is $4\frac{3}{4}$ to 5 inches across. It has a medium wiry stem and medium upright foliage. Bulb production and germination is good.

\$3.00 each, any size; \$24.00 per 10, any size.

**PEACELIGHT (Kadel-'53) 82 days-410
(Gardenia x Myrna x Mamie x New Era)**

PEACELIGHT is a clear, medium yellow with a soft greenish glow. Its large, wide open florets with recurved petals are borne on a tall, strong stem. It opens 7 florets with 5 more showing color on an 18-bud spike.

Peacelight

While **PEACELIGHT** will hold its own on the show table, we feel its greatest success will be as a cut flower. This opinion is based on its color value, its excellent substance, the fact that it is a tall, vigorous grower and that it propagates readily, making strong growth from bulblets. It grows 56 inches tall and blooms in 82 days.

Its unusual phosphorescent glow attracted much attention from the hobbyists and commercial growers who saw it exhibited at the Union, Havre de Grace and Binghampton shows last summer.

Materials for Disease and Insect Control

(Prices subject to change without notice)

Dust and Spray for Insect Control

We have found DDT to be the most effective material for control of thrips. It should be used as a dust at digging time and again at cleaning. During the growing season the plant should be dusted every 7-10 days from the time the plant is 6-10 inches high until the blooms open. Wettable DDT (DDT-50W) diluted to 5% strength can be used as a spray instead of dust in the field.

DUST FOR DISEASE CONTROL IN STORAGE

Tests show that either Arasan or Spergon dusted on Gladiolus bulbs at digging time, and again after cleaning when they are put away for the winter, materially checks the advance of the fungus type of Gladiolus disease. These have been recommended as a dust treatment to replace the dip method of using New Improved Ceresan. Just dust the bulbs heavily and plant, and the dust will tend to immunize the bulb. Wettable Spergon can be used if the dip method is preferred.

SPERGON GLADIOLUS DUST

A mixture of Spergon (a fungicide) and DDT. If you use this you do not need to use DDT dust in storage. Dust at digging time and again at cleaning time.

THAT'S IT! BLACKER THAN YOUR HAT!

But don't get scared—it's a rippin' good glad that will create lots of noise in the 454 class

G. L. Pierce (Black Phantom x Burma)

We have purchased part interest in this new black-red. THUNDERBOLT is a very beautiful, deep maroon with heavily ruffled, wide open florets. It opens up to 7 florets of excellent substance and placement on well proportioned flowerheads of 18-19 buds. THUNDERBOLT is a heavy bulblet producer and an excellent germinator. It makes fine growth from bulblets. It is medium in height. Plant and bulb are very healthy. It blooms in 85 to 90 days from large bulbs.

THUNDERBOLT has quite a reputation in the Midwest and many fans have been eagerly awaiting its introduction. Its show record: 1950—Chicago Show: 3 spike Honorable Mention.

However, you better have them labeled, and we will put in 20 8-inch garden stakes so you can mark them. More interest is developed where you can see the names as they bloom. And then you may find some one or more varieties that you especially like and want to order more. Varieties will be made up partly of comparatively new varieties as well as the better standard ones.

Small Flowered and Miniature Gladiolus

The Dainty Miniatures. Unexcelled for Home Flower Arrangement and Exhibition Purposes.

Did you ever have a vase of Big Top or some other 5-foot giant tip over on your living room rug or table? It does happen and is there any wonder when there isn't a vase made suited for such flowers. This doesn't have to happen if the varieties in question are small decoratives which are ideally suited to the small home, apartment, for hospital bouquets, arrangements, etc. Garden flower lovers have been clamoring for a small type of Gladiolus to fit this need, and they are now available after years of hybridizing, in many colors, including beautiful little ruffled ones, the dainty little face-ups, and some growing only 2½ feet high.

COLLECTION No. 10 RUFFLED MINIATURE COLLECTION

The original primulinus blood is not seen in this group. Most all are intensely ruffled and wide open flowers—just miniatures of the big Glads. Very choice and deserving of a place in your garden.

SMALL FLOWERED or HOME ARRANGEMENT GLADS

These baby Glads are the most useful of all Gladiolus and are becoming very, very popular. For decorating in the home they cannot be surpassed. They are also useful for corsages, bridal bouquets, centerpieces, mantel arrangements and any place where lighter, more dainty material is appropriate. Garden Club people find these little Glads very useful. They are satisfactory where larger Glads might be cum-

bersome and out of place.

We urge our customers to grow these in groups of at least 10 bulbs where possible. For arrangements of these you may need several spikes and one or two bulbs will not be enough. Medium size and even small bulbs will make exceptionally fine cutting material in most varieties.

We have been very much impressed with the interest taken in the small flowered Gladiolus and with the number of people sending in photos for the contest offered in last year's catalog. Many photos were received and congratulations to Mrs. A. M. Eggen in winning the first as well as to the other winners. We hope that many more will enter this contest in 1953.

Gladiolus Seed

The greatest thrill to a Gladiolus grower comes from raising seedlings. The elements of chance and suspense appeal to all of us. We are willing to gamble a little time on the hope that we may be able to produce a wonderful new Glad which may start a new race in Gladiolus and may bring us in some extra cash.

There are a few catalogers who offer seed for sale. As an answer to many resquests we are making available to our customers both open pollinated (chance) seed and hand pollinated seed.

OPEN POLLINATED (CHANCE) SEED

We have carefully selected proven parents from which to take selected chance seeds. These were in our Test Garden where the bees have a choice of the world's best from which to take pollen. Many of the varieties at present retail from \$3 to \$10 per single bulb. We are offering these seeds in limited quantity. Please state whether you want seeds taken from large type or miniature Gladiolus.

Pkt. of 50 or more hand selected CHANCE seeds **35c** per packet.

HAND POLLINATED GLADIOLUS SEED

We have secured the assistance of a capable and successful hybridist who has agreed to supply us with hand pollinated seeds. He has studied parentages, growth habits, disease tendencies, etc., and has applied his knowledge for several years in hybridizing Mums and Gladiolus. He uses some of the older proven strains in combination with many of the newest varieties in his work.

We are offering his list at 50c per packet containing 20 plump seeds. If you wish specific crosses send for the mimeographed list. We have made a list of all the crosses he offers this season and will mail it upon request.

Hand Pollinated Seed — **50c** per packet.

Gladiolus Care and Culture

CULTURAL DIRECTIONS IN BRIEF

Excellent blooms can be had if you follow these brief instructions. Gladiolus can be planted in any kind of soil where they will have full sunlight all day. No other plants or trees should be allowed to take their share of the moisture, sunlight and food. Good drainage is essential. Water is necessary but Glads do not stand wet feet. Frequent cultivation keeps down weeds and conserves moisture in the soil.

Any good garden fertilizer is good if applied three times during the season. Our method is to apply it (1) in the trench at planting time, (2) as a side dressing when the plants are about 6 inches high and (3) again just as the buds break through the sheath. A thorough watering with or just after each side dressing will help in making the fertilizer available and will give the Glads that extra stretch you want. We plant to plow under one or two lots of green manure (cover crop of rye, rye grass, clover, or other good material) before we plant the crop. This provides the needed humus in the soil.

Gladiolus can be protected from thrip (a tiny insect) in storage and in the field by the use of 5% DDT. Bulbs in storage should be dusted as soon as dug with 5% DDT Dust and again after the bulbs are dry and cleaned (old bulbs and roots removed). This dust will do no harm if left on the bulbs even after planting. The plants should be dusted in the field or sprayed with 5% DDT solution. For spray mix 1 tablespoonful of 50W DDT with 1 gallon of water. Overdosing will do no harm. Dust or spray every 7-10 days from the time the plants are 6 inches high.

When cutting blooms be sure to leave at least 4 good leaves on the plant to mature the bulb. Dig when the frost kills the tops. Cut the top off as close to the bulbs as possible and store the bulbs in bags or screen bottom trays. If you store in bags, be sure and leave the tops of the bags open for the circulation of air through the bulbs. Dust with 5% DDT Dust or Spergon Gladiolus Dust. Spergon Gladiolus Dust has DDT in it so one dusting will serve two purposes—a protection against disease and against thrip. Dry the bulbs in a cool airy place for two weeks or more or until the roots and the old bulb can be easily removed. Then clean them (remove the old bulb, roots, dirt and bulblets) dust again with either DDT dust or Spergon Gladiolus Dust and put away for the winter. Winter storage should be between 45 and 60 degrees, should be dry and should have air circulation. The fungus diseases of Gladiolus thrive in cool, damp storage with no air circulation. Be sure to dust all additions to your collection of bulbs with DDT no matter who they come from.

Sort and discard any bulbs in the spring that show any signs of disease or rot. Dip before planting in New Improved Ceresan, using 1 oz. N. I. Ceresan, 3 tablespoons of Grasselli Spreader Sticker to 3 gallons of water. 15 minutes for bulbs and 30 minutes for bulblets is safe. DO NOT EXTEND THIS TIME. Plant as soon as possible while the bulbs are still wet. BE SURE YOU GET THE NEW IMPROVED CERESAN, NOT CERESAN M.

DETAILED CULTURAL INSTRUCTIONS WILL BE SENT WITH EVERY ORDER.

Dahlia Culture

Dahlias should not be planted until the ground warms up in the spring. Here we plant between May 15th and June 15th. They will grow in good garden soil, well fertilized and containing plenty of humus. This can be supplied by plowing under a cover crop the preceding year. Tubers should be planted at least three feet apart each way and the larger kinds can use even another foot each way when well grown.

Place the tuber horizontally in the bottom of the hole about six inches deep. Cover about 2 inches and finish filling the hole as the plant grows. Stakes should be put in at the time of planting rather than later and stakes 5 feet long are usual.

To produce the best bloom on the larger growing kinds pinch out all buds except the center one on every lateral branch. Pinch out two out of every 3 buds that form along the stalk or along the laterals, allowing only one bud to grow in every group of three. This will increase the size of bloom and length of stem.

Dig the plants after the first frost kills the tops. Cut the tops off at once. Dry in the sun a few hours before storing and store in boxes or barrels in a cool place. 45 degrees is best. Cover the boxes or barrels with newspapers or wrap each clump in paper to keep it from drying out. Wax paper such as old bread papers are very effective wrapping.

GARDEN and BUSH FRUITS

We grow several acres of Strawberries, Raspberries and garden roots. Ask for our list.
